

Performance Testing Report

Project: AI-Powered Lead Generation System

Developed by: Minu Antony

1. Introduction

This report documents the performance testing carried out for the AI-Powered Lead Generation System developed on Salesforce. The objective is to verify that lead management, AI processing, and automation perform efficiently under normal operating conditions.

2. Objectives

Verify response time, validate AI lead scoring, ensure Flow Builder automation executes correctly, confirm dashboard responsiveness, and verify overall system stability.

3. Test Environment

Platform: Salesforce Developer Edition
AI: Agentforce
Automation: Flow Builder & Prompt Builder
Browser: Chrome / Edge
Network: Stable Internet

4. Test Scenarios

Lead Creation, AI Lead Scoring, AI Summary Generation, Flow Automation, Email Notification, Dashboard Loading.

5. Observations

The application remained stable during testing. AI summaries and lead scores were generated successfully, flows executed correctly, and dashboards loaded without significant delay.

6. Conclusion

The AI-Powered Lead Generation System met the expected performance criteria for normal business usage. No critical performance issues were identified.

Test Case	Expected Result	Status
Lead Creation	Lead created successfully	Pass
AI Lead Scoring	Score generated	Pass
AI Summary	Summary generated	Pass
Flow Automation	Workflow executed	Pass
Dashboard Loading	Loads correctly	Pass
