

Project Planning

AI-Powered Lead Generation System

Developed by: **Minu Antony**

Introduction

This document outlines the planning approach for developing the AI-Powered Lead Generation System using Salesforce, Agentforce, Prompt Builder, and Flow Builder.

Objectives

Automate lead capture, prioritize leads using AI, improve sales productivity, automate workflows, and generate actionable insights.

Project Scope

Salesforce configuration, AI integration, lead scoring, automation, reporting, testing, and deployment.

Project Phases

Requirement Analysis → Planning → System Design → Development → AI Integration → Testing → Deployment → Maintenance.

Resources

Salesforce Developer Org, Agentforce, Prompt Builder, Flow Builder, standard hardware and internet connectivity.

Risk Management

Apply validation rules, role-based security, testing, backup, and monitoring to reduce project risks.

Expected Outcome

A scalable AI-enabled Salesforce application that automates lead management and improves conversion rates.
